Senior Software Engineer based in Toronto with 6+ years of experience specializing in front-end architecture, high-scale web applications, and AI-native engineering workflows. Proven track record of delivering complex products ahead of schedule by leveraging agentic AI tools, driving RFC-led architectural decisions, and maintaining rigorous accessibility and code quality standards.

EXPERIENCE

theScore **March 2025 – present**
Senior Software Engineer Toronto, Canada

- Integrated agentic AI workflows (Claude Code, BMAD method) into feature planning and development, driving spec-driven execution and sharding to accelerate frontend delivery timelines.
- Led end-to-end web platform setup for the launch of Hollywood Casino Canada, delivering ahead of schedule by auditing region gating, configuring multi-brand environment variables, and refactoring LaunchDarkly feature flags.
- Architected and delivered Casino Tournaments and In-House Jackpots products, introducing the Rive animation framework and authoring mock-driven development frameworks to unblock frontend velocity before backend schema completion.
- Championed codebase stability and observability by building an extensive Playwright E2E testing suite for the casino lobby and creating dedicated Datadog performance dashboards to monitor multi-region application health.
- Spearheaded the end-to-end architecture and deployment of the Omnichannel Jackpots platform, delivering a data-driven web application to 1920x1080 digital displays inside physical casinos ahead of schedule and under budget.

theScore **March 2024 – March 2025**
Software Developer Toronto, Canada

- Led the web development effort for the Hollywood Casino application launch on Next.js, resulting in a deployment six weeks ahead of schedule and enabling immediate revenue generation.
- Engineered critical casino promo credits features, including the order of funds selection modal, Available Rewards section, and account settings integration, achieving feature parity with competitors.
- Improved technical visibility and operations by creating a Casino Client Page Load Performance dashboard in Datadog and consolidating performance metrics, and personally handled 8 non-production and 2 production deployments.
- Spearheaded documentation and cross-functional coordination by writing a technical RFC and ticket planning document to align web, infrastructure, DevOps, and platform teams for the standalone casino project.
- Championed web accessibility and development standards by working on features like animated game card focus states and refactoring CI pipeline configuration to enable visual regression and accessibility testing for new applications like Hollywood Casino.

Xanadu **January 2023 – March 2024**
Software Developer II Toronto, Canada

- Enhanced the Xanadu.ai website by implementing server-side rendering, image optimization, and several new pages. Leveraged Shopify APIs to seamlessly integrate the Xanadu merchandise shop into the website.
- Drove the front-end work for a refresh of the quantum hackathon software challenge dashboard.
- Migrated the PennyLane.ai website from a Python templating system to a modern development framework using Gatsby, React, TypeScript, and Tailwind.
- Led front-end development of the Generic Datasets project for visualizing and interacting with quantum datasets (scoping, requirements gathering, and implementation).

Xanadu **April 2022 – December 2022**
Front-End Developer Toronto, Canada

- Led a company-wide accessibility audit and advocated for compliance with web accessibility best practices.
- Co-created a reusable component library built with React, TypeScript, Tailwind, and Storybook.
- Developed key features of Xanadu's quantum hackathon software with React, TypeScript, Tailwind, and GraphQL.

CarbonCure Technologies **March 2021 – April 2022**
Front-End Developer Toronto, Canada (remote)

- Responsible for planning, building, testing, and improving CarbonCure's internal suite of software applications.
- Lead developer of two key projects built with React, TypeScript, and MUI incorporating map layers, tables, and other data visualizations.
- Published release notes and performed live and pre-recorded product demos for stakeholders.

Greenpeace Canada **July 2020 - February 2021**
Front-End Developer Toronto, Canada

- Maintained and improved the Greenpeace Canada website using WordPress, HTML, CSS, and JavaScript.
- Developed petition pages, donation pages, and emails using Greenpeace Canada's advocacy tools.
- Managed relationships with external designers, developers, and internal end users.

TECHNICAL SKILLS

AI Workflows & Engineering	Claude Code, BMAD Method, Spec-Driven Development, Context Engineering, Prompt Engineering, GitHub Copilot
Frontend Architecture & UI	React, Next.js, Tanstack Start, TypeScript, JavaScript, HTML/CSS, Tailwind CSS, MUI, shadcn/ui, Gatsby, Remix, Astro
State & Data Management	React Context, Zustand, Apollo Client, TanStack Query, REST & GraphQL APIs
Backend & CMS	Node.js, Express, Apollo Server, MongoDB, Firebase, Sanity, Strapi, PostgreSQL, Drizzle ORM, Shopify, WordPress
Testing, Observability & CI/CD	Playwright, Jest, Vitest, React Testing Library, Datadog

EDUCATION

Juno College of Technology **February 2020 - May 2020**
Web Development Immersive Bootcamp Toronto, Canada

University of Toronto **September 2014 - August 2015**
Master of Arts, Sociocultural Anthropology Toronto, Canada

University of British Columbia **September 2009 - August 2013**
Bachelor of Arts, Anthropology and French Kelowna, Canada
